

Ali Akbari

Calgary, AB | 825-438-2985 | alimustanserakbari@gmail.com | [LinkedIn](#)

EDUCATION

University of Calgary

Bachelor of Science in Computer Science

Calgary, AB

Expected Graduation Date: January 2027

- **Awards:** Dean's List (2024), Jason Lang Scholarship (2024), Three Year Honour Society (2022)
- **Relevant Coursework:** Data Structures & Algorithms, Artificial Intelligence, Object-oriented programming, Data Science, Database Management Systems, Operating Systems, Computer Networks, Information Security

SKILLS & TOOLS

Skills: Python, Java, Typescript, React, TailwindCSS, SQL (MySQL/Postgres), C/C++, C#, HTML, Javascript

Tools: Git/Github, Node.js, MongoDB, Docker, Linux/Unix, Vercel, Supabase, Microsoft Excel, Tableau, Jira

WORK EXPERIENCE

Freelance Web Developer (Contract) | [Ria's Boutique](#)

Calgary, AB | Jan 2026 - Present

- Built and deployed a production e-commerce storefront using React, TypeScript, Vite, Tailwind CSS, and Vercel, delivering an end-to-end checkout flow that improved visitor-to-purchase conversion rate by 18%
- Implemented Clover Hosted Checkout with TypeScript serverless APIs, including checkout session creation, signed webhook verification, and fallback payment-status
- Developed a Supabase (PostgreSQL) backend order system with webhook event tracking and a protected admin dashboard, enabling real-time visibility into 100% of paid and pending transactions
- Integrated Resend email notifications and configurable fulfillment logic (shipping vs. in-store pickup); added Decap CMS + GitHub OAuth to enable non-technical content updates

PROJECT EXPERIENCE

UCalgary Lost & Found Web Application

Calgary, AB

- Collaborated in a team of 5 to architect and develop backend REST APIs using Node.js and Express.js, implementing JWT authentication middleware and role-based access control for student, guest, and staff roles
- Designed MongoDB schemas for items and claims; containerized full-stack application (React, Express, Tailwind CSS) using Docker and Docker Compose

Degree Navigator Web Application

Calgary, AB

- Collaborated in a team of 3 to develop a modular front-end using HTML, CSS, and JavaScript across multiple pages, delivering a responsive web interface for students and advisors to track academic progress and manage course planning, created EER, relational model, HIPO & DFD diagrams for functional design and testing
- Built PHP backend with MySQL database, implementing secure CRUD operations, session management, and role-based access

AI-Based Scheduling Optimization System

Calgary, AB

- Collaborated in a team of 5 to design and implement a search-based system in Python to optimize scheduling of games and practices while satisfying hard constraints and minimizing soft-constraint penalties
- Engineered a set-based search model (or-tree + genetic algorithm) and integrated efficient data structures; developed a robust parser for structured input files with validation and error handling

Unity Endless Runner Game

Calgary, AB

- Utilized C# and Unity to design and develop a feature-rich 3D endless runner game, seamlessly integrating smooth movement mechanics, real-time collision detection, physics-based interactions, and highly responsive gameplay that achieved 99% accuracy in comprehensive and rigorous object interaction tests
- Engineered gameplay systems including player input handling, collision detection, physics-based interactions, difficulty scaling, and dynamic speed progression, resulting in a responsive and replayable game that improved user retention and engagement
